Experience

GNOME Foundation

2025 – Present

Open Source Contributor – Nautilus (File Manager)

Merge Request #1883

- Shipped a merged C-codebase fix to Nautilus's GTK file chooser that resolved a layout bug affecting filenames containing newline characters, passing full GNOME maintainer review.
- Verified the fix across GNOME Builder and Flatpak sandbox environments and validated it through GitLab CI, confirming no regressions across GTK-based desktop environments.
- Iterated across multiple rounds of maintainer review, addressing feedback on coding style and edge cases to bring the patch in line with GNOME's C contribution standards.
- Collaborated asynchronously with maintainers across time zones on a file manager shipped to millions of Linux desktop users, gaining hands-on fluency in issue triage, merge-request workflows, and CI-gated release processes.

Projects

Project Echo – [GitHub](#)

Python, LangChain, Ollama (Gemma), FastAPI

- Built a fully local LLM agent (LangChain + Ollama/Gemma) that controls terminal and system operations via natural language, eliminating cloud API dependency and its latency/privacy costs.
- Designed a custom LangChain tool suite (bash execution, process management, Hyprland window control) with checkpointed memory, enabling coherent multi-turn task execution.
- Exposed agent capabilities as a FastAPI REST service, enabling other local applications to consume agent functionality over HTTP without duplicating orchestration logic.

Talky – [GitHub](#)

Java, Swing, Socket Programming

- Built Talky, a peer-to-peer chat application in Java, enabling real-time text messaging directly between two clients over a network without a central server.
- Implemented the networking layer from scratch using Java's socket APIs, handling connection setup, message exchange, and bidirectional real-time communication.
- Built the desktop GUI with Java Swing, delivering a responsive, user-friendly interface for sending and receiving messages instantly.

Topprdupe – [GitHub](#) | [Live Demo](#)

Python, Django REST Framework, React, Tailwind CSS

- Designed and deployed a full-stack AI tutoring platform end-to-end, pairing a Django REST Framework backend with a React frontend.
- Architected modular REST services for authentication, chat sessions, and study workflows, keeping the backend independently testable and extensible.
- Built and shipped a responsive React + Tailwind UI integrated with the backend API, deployed live for real-world use and iteration.

Skills

- **Languages:** Java, C++, Python, C, JavaScript, SQL
- **CS Fundamentals:** Data Structures & Algorithms, Object-Oriented Design, Complexity Analysis
- **AI / Agentic Tooling:** LangChain, Ollama, FastAPI, Prompt Engineering, Tool-use Agents
- **Web & Backend:** Django REST Framework, React, Next.js, REST API Design
- **Databases:** MySQL, SQL Query Design, Relational Schema Design
- **Tools & Practices:** Git, GitHub, GitLab, CI/CD, Linux, Debugging, Unit Testing, Code Review

Certifications

• **Red Hat Certified System Administrator I (RH124)** – [Credential](#)

May 2026

• **Red Hat: Linux Fundamentals (RH104)** – [Credential](#)

May 2026

Education

Galgotias University

B.Tech in Computer Science Engineering

2024 – 2028

Delhi, India
